Google has launched an education category in the Google Apps Marketplace designed to help schools and universities discover and deploy new web applications that integrate with their existing Google Apps accounts. The new education category includes over 20 applications from 19 vendors ranging from learning management systems (LMS) to student tools and teaching aids – all of which integrate with Google Apps for Education. Each app can be accessed through single sign-on and the Google universal navigation bar and many offer deeper integrations that synchronize with Google Calendar and Documents. To learn more about the education category of the Apps Marketplace – and hear directly from the developers of these applications – register to attend live Google webinars and Q&A on Wednesday, February 2nd. La arquitectura de las bibliotecas virtuales posee dos aspectos: la arquitectura del edificio de la biblioteca virtual (su sitio web) y la arquitectura de la información allí contenida. Cada uno de estos temas constituye hoy una especialización profesional. Cuando una universidad necesita crear una nueva biblioteca tradicional, existe cierto

consenso internacional, y mucho se ha publicado sobre ello, respecto de los requerimientos arquitectónicos de un edificio destinado a una biblioteca universitaria y la forma recomendada de construir cada una de las secciones de ésta, así como las características de construcción de cada uno de los muebles para cada servicio y para los procesos técnicos.
